

# E-CAT™ Full Composite Frac Plug

The E-CAT™ Full Composite frac plug utilizes high strength composite components to provide a dependable, durable and cost-effective design for temporary zonal isolation during multi-stage completions in both vertical and horizontal wells. E-CAT™ frac plugs are constructed from molded or machined composites with composite upper and lower slips, ensuring fast drill time while remaining highly reliable.

The E-CAT™ frac plug is compatible with the Baker #10, #20 or Owens Compact Setting Tool. The shear cap is also designed to allow the ball to be placed inside the adaptor, which eliminates the need to pump the ball from surface.

## FEATURES AND BENEFITS

- Available in 4.500", 5.000" and 5.500" sizes
- Compact Design, the plug length is less than 18-in in length
- Upper and lower slip designed with composite material
- Sets securely in casing up to 125ksi material grade
- Consistent drill times of six minutes or less
- Can be drilled out using conventional rigid tubing or coiled tubing
- Pump down wiper available upon request
- Patented element back-up system provides superior sealing capability
